# DECO FIBERS

## **DECO FIBERS** **PRODUCT DESCRIPTION**

### **TECHNICAL DATA:**

**DECO-FIBERS** are designed to be used in decorative concrete surfaces where there is a need for a strong fiber that will not show at the surface of the slab or Overlay. Our fibers are used on Stamped Concrete, plain slabs and our Polymer Overlay.

**WHY USE FIBER?** More and more contractors, engineers and architects are replacing welded wire mesh with re-inforcement fiber, because it works better on shrinkage and crack control. Together with the ease of mixing, higher performance and comparable if not lower cost than wire mesh, using our fibers on your decorative work will certainly help you achieve a better slab or stamped overlay.

### **BENEFITS OF USING DECO-FIBERS:**

Smooth hairless finish. Great for stamped concrete and textured overlays.

Significantly reduce shrinkage cracks

Replaces welded wire mesh in NON-STRUCTURAL applications, reduces time and labor costs.

Reduces permeability.

Improved freeze-thaw resistance.

Increased impact and abrasion resistance.

### **MIXING:**

**DECO-FIBERS** come pre-measured in 1-pound bags, add one bag per cubic yard of concrete.

**WARRANTY:** **DECOSUP** warrants this product to be free from manufacturing defect. Since no control is exerted over its application and use, **DECOSUP** makes no warranty, either expressed or implied, concerning this product. Seller and manufacturer's obligation shall be limited to replacing that portion of the product proven to be defective.
